delay

CBG-LON-20260511-TRBP28W7WT7.pdf

1. List PDFs in the tickets directory, newest first
2. Get the name of the most recent file in the list
3. Delete the path, station codes and date
4. Delete the file termination
5. Paste remaining text into the system clipboard

```
ls -t ~/delay/*.pdf | head -n1 |  
sed '\''s#/home/jon/delay/[A-Z-  
]\+[0-9-]\+##g'\'' | sed  
\''s/\.pdf//g'\'' | pbcopy
```

CBG-LON-20260511-TRBP28W7WT7.pdf

1. `ls -t ~/delay/*.pdf`

2. `head -n1`

3. `sed '\''s#/home/jon/delay/[A-Z-]\+[0-9-]\+#g'\''`

4. `sed '\''s/\.pdf//g'\''`

5. `pbcopy`

Couldn't you just do that with Python?

Files: listing, moving, copying, deleting...

Mac/Linux `bash -c "compgen -c"`
Windows `compgen -c`

Getting out of trouble

`Ctrl + c` kill the process

`Ctrl + d` end of input

1. Find all your cli commands with 'print' in them
2. Count them (not manually!)
3. List commands 50-60 in an alphabetical list

1. How many makers have 'Henry' in name1
2. How many rows have a source other than BIFM?
3. Find the highest ID for a furniture maker in Scotland
4. Find the earliest valid date in date1
5. How many complete names occur more than once? [*hard one!*]
