

Command line challenge

Rules

Work in teams

Everyone must be able to explain your solution

No AI and no Stack Overflow or similar

But you can look up documentation online

Challenge

List the top 10 “poor X” characters in *Middlemarch*

Account for the fact that Dorothea is sometimes called “Dodo” and
Rosamond “Rosy”

You will need a regex to match any word (the character name):

`\w+`

If you finish quickly...

Account for characters called Mr. X and Mrs X (you might want to use round brackets and a semi-colon somehow...)

Download the other Eliot novels from gutenberg.org and do the count across all novels.

Still not finished? Remember the 'Buckingham' addresses in `bifmo.tsv`? Can you return all the lines not just the cut columns?

More stuff

Editing text from the command line? On a server maybe?

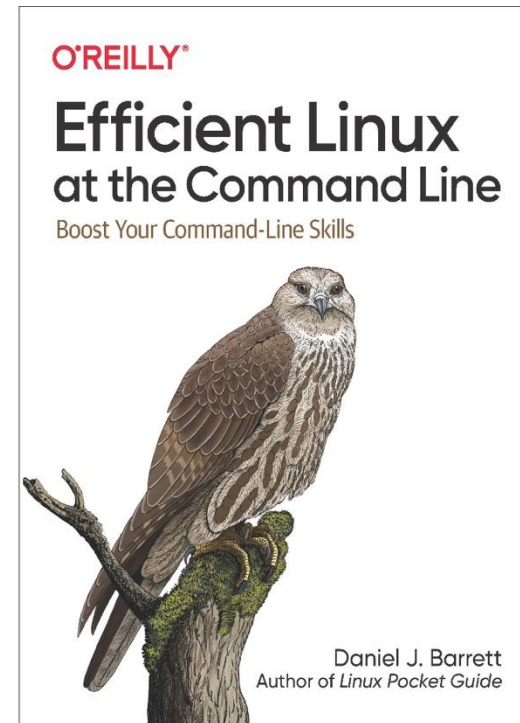

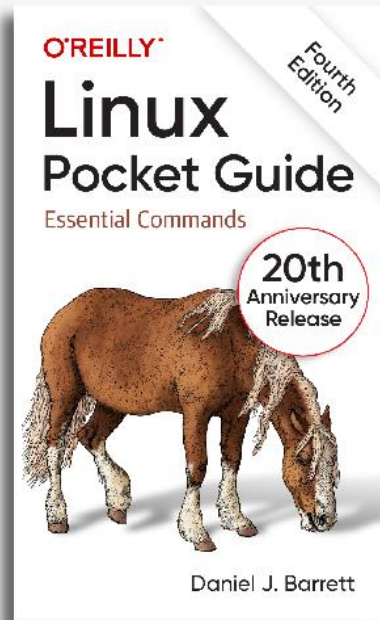

You could use `sed` but normally I'd

use `nano` or `vim`

More modern cli tools

Classic CLI	More recent alternative
grep	ripgrep
find	fd
ls	eza
cd	yazi
cat	bat

My favourite CLI books

```
ls -t ~/delay/*.pdf | head -n1 |  
sed '\''s#/home/jon/delay/[A-Z-  
]\+[0-9-]\+##g'\'' | sed  
\''s/\.pdf//g'\'' | pbcopy
```
